

Environmental Due Diligence Services for Businesses Affected by COVID-19

Helping you make informed business decisions related to short and long-term environmental risk mitigation in this dynamic business climate.

We understand the impact of the global COVID-19 pandemic, and how you are facing challenging pressures and are looking towards various options to generate cash flow. Merger, divestiture, and acquisition (MD&A) activities and strong due diligence are even more important during this sensitive time. Sound due diligence encompasses higher level deal optimization through evaluation of sustainable practices and environmental, social and governance issues to mitigate and optimize the environmental footprint of the transaction. Geosyntec provides assistance to address these environmental due diligence requirements, many of which can be initiated in a “contactless” environment.

Our due diligence practitioners specialize in assisting our clients navigate MD&A activities by combining technical expertise identifying business and financial risk, with producing streamlined recommendations designed to enhance, not hinder, deal flow. Key services during this time include:

- Rapid desktop environmental screening, research and data room support
- Environmental, health and safety due diligence assessments
- Post-transaction support including integration and business continuity planning
- Environmental financial provisions and liability management assessments
- Planning and preparation for divestment and exit

We are ready to support you both locally in North America and globally through our participation in CAT Alliance (www.cat-alliance.com). We continue to function at a high level during this time of limited mobility – serving our clients via offices or remotely, and continuing to operate to support projects that are classified as essential. While focusing on addressing COVID-19 concerns for your operations, you can trust Geosyntec to provide environmental due diligence support when you need it most.

Assessing environmental risk during this period of uncertainty is critical to:

- Balance capitalization, restructuring and risk tolerance
- Consider short- and long-term risk
- Optimize the environmental footprint of the transaction
- Achieve sustainability and environmental metrics
- Avoid potential enforcement and financial penalties

Our professionals are advisors to:

- Industrial and commercial clients
- Institutional investors and fund managers
- Insurers and law firms
- Multilateral development organizations
- Public/NGOs
- Private developers
